SALARY

Does Gender Affect Salary Directly?

SALARY

Mean & Median Salaries

	gen_name	mean_Sal94	median_Sal94	mean_Sal95	median_Sal95
	<char>	<num>	<num>	<num>	<num>
1:	Male	177338.8	155006	194914.1	170967
2:	Female	118871.3	108457	130876.9	119135

Distribution Spread of Female and Male Salaries

Females earn less than males on average

Does Other Factors Affect Salary?

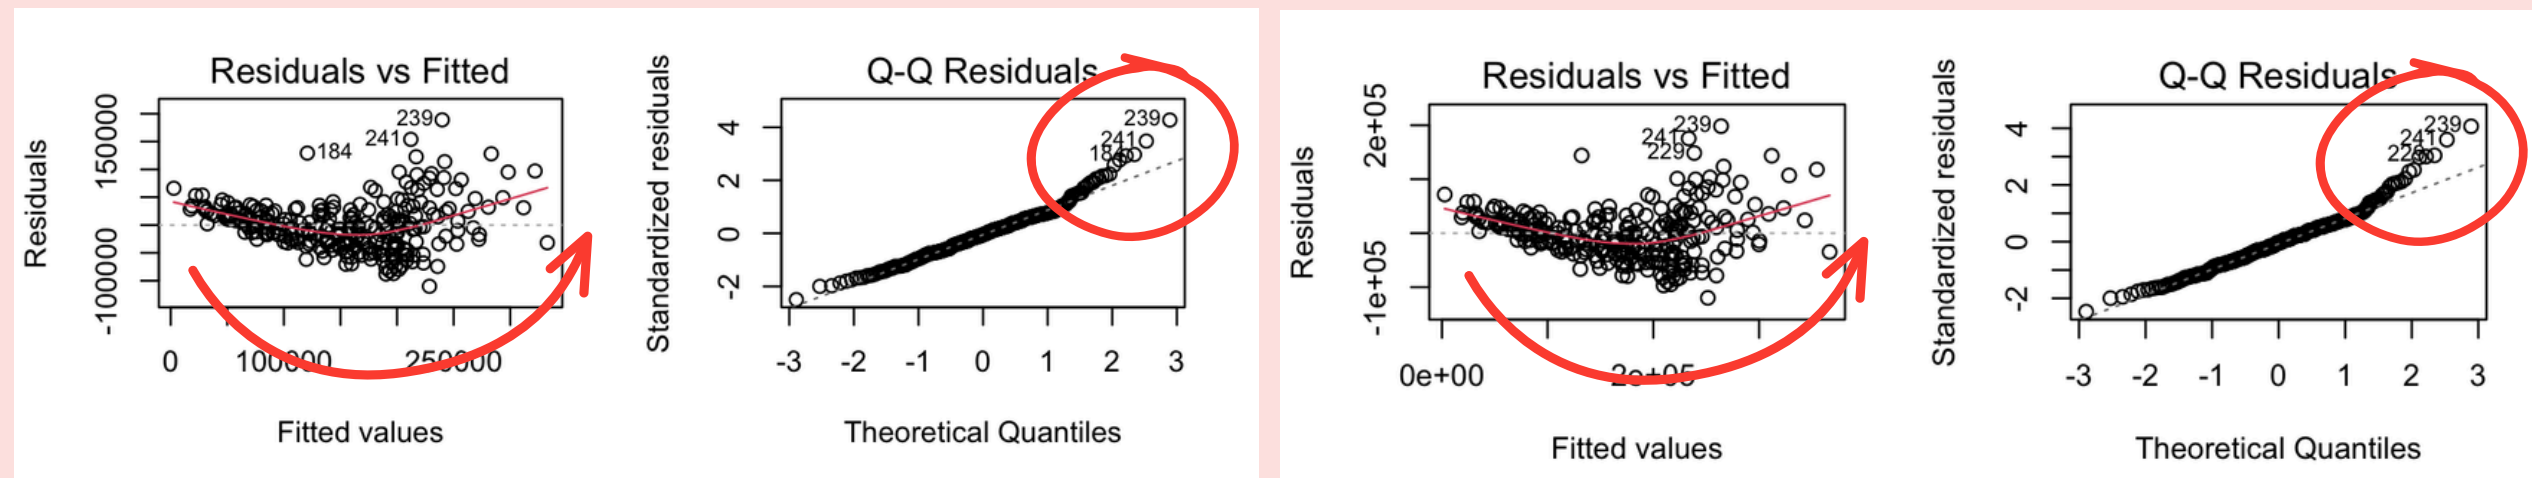

Linear Regression

$$\text{Sal94} = 285727 + 11727 \text{ GenderMale} + 20646 \text{ CertCertified} - 36485 \text{ ClinClinical} + 4739 \text{ Exper} - 36511 \text{ Prate}$$

$$\text{Sal95} = 314494 + 12439 \text{ GenderMale} + 22457 \text{ CertCertified} - 39499 \text{ ClinClinical} + 5235 \text{ Exper} - 40243 \text{ Prate}$$

✗ P-value for Gender = 0.063 & 0.073 respectively

Determining Accuracy

1) Non-linearity
 2) Heavy/right tail + Outliers
 → affects p-values/
 CI if not handled

Model may not be accurate!

Conclusion

RANK

Females have LESSER experience than required to be promoted

More male FULL professors, 2.67 times more likely to hold a higher rank than females

SALARY

Females earn between \$3.6k to \$7.5k LESS increment than males

Males earn MORE with SIMILAR experience levels

Pay gap EXISTS between males and females of the same rank
